Product Overview. CATIA - Quick Surface Reconstruction 2 (QSR) easily and quickly recovers surfaces from digitized data that has been cleaned up and tessellated using the CATIA Digitized Shape Editor 2 (DSE) product.

In Digitized Shape Editor, the cloud of points elements are created in the specification tree with the name and the icon of the generative command, with the exception of files imported individually (one single file imported or several files imported, but with the option Grouped not checked) that keep the name of the input file.

An Overview of Digitized Shape Editor Digitized Shape Editor (DSE) is used at the initial stages of the Reverse Engineering cycle. In reverse engineering, geometry of existing physical object is captured by scanning. The result is obtained in the form of digitized data. Digitized Shape Editor allows various operations on this digitized data.

CATIA has three workbenches that are used for reverse engineering: Digitized Shape Editor, Quick Surface Reconstruction and STL Rapid Prototyping. I'm really not that familiar with any of these workbenches - sorry. The DMU workbenches typically work with CGR data, so I'm confused why you would use that to convert an STL file.
